DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1 and 6 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Berger et al. (US Patent No. 5181214).

With respect to claims 1-3 and 6-8, Berger discloses in Fig. 1-3 a microelectromechanical system for controlling the temperature of a heat-generating component which is a laser diode 31, comprising: a magnetic heat sink device 13; a temperature sensor 43; and control circuitry 65; wherein the temperature sensor detects the temperature of the laser through the heat sink device and feeds the sensed temperature to the control circuitry. It is noted that the thermoelectric cooler (T-E cooler) is considered as a magnetic heatsink because it includes megneto caloric (see paragraph 0035, Bell, US Publication No. 20030005706).

With respect to claim 4, Berger discloses the control circuitry comprising a processor 65.

Art Unit: 2828

With respect to claims 5 and 9-10, Berger discloses the processor 65 maintains the temperature of the laser to the maximum operating temperature which is believed that the processor compares the sensed temperature against a the predetermined temperature (col. 5, lines 59-67 to col. 6, lines 1-10) to take more heat out of the laser when the detected temperature is higher than the temperature set point and take less heat out of the laser when the detected temperature is lower than the temperature set point.
